Draw a diagram describing what happens when the user creates a note using the *single-page version* https://fullstack-exampleapp.herokuapp.com/spa of the example application.

Pilvi Rajala

User — Browser — Server

> The user types something into the text input on page fullstack-exampleapp.herokuapp.com/spa and presses save ('Talleta') button

> The form does not have action specified. Instead code in spa.js (loaded when use navigated to the page) is executed. This code redraws the notes (including the added note) and also sends a POST request to the server.

Browser → Server: https://fullstack-exampleapp.herokuapp.com/new_note_spa

> Browser makes a POST request to the address **new_note_spa.** This request contains the user input (form data) in JSON format ('content' and 'date' fields)

Server → Browser: Status 201, Created

User — Browser — Server
